Gentlemen

Enclosed please find a copy of the Final Report for the Phase II Geologic Characterization Data Acquisition, Task 2, Additional Shallow High-Resolution Seismic Reflection (HRSR) Profiling of Indiana Street for the Rocky Flats Plant. This report presents the interpretation and results of all Indiana Street HRSR data, a total of 8,750 linear feet. To interpret the stratigraphy and structure along Indiana Street, the seismic data were integrated with borehole lithologic logs, geophysical logs, vertical seismic profiles (VSPs), and recent surface geologic mapping. The project was initiated to identify possible subsurface contaminant pathways off-site at the eastern boundary of the plant.

If you have any questions or comments, please contact Jen Pepe of my staff at 966-2184

Sincerely,

James K Hartman
